**Recommended BA sequence:**

Freshman year: ECON 1011, ECON 1012, STAT 1111/1053/1051, MATH 1221/1231/1252

Sophomore year: ECON 2101, ECON 2102, upper level econ electives

Junior year: STAT 2112/2118 or ECON 2123, upper level econ electives

Senior year: upper level econ electives, ECON 4198W

Students are encouraged to complete the two principles classes (ECON 1011 and ECON 1012) plus the intro stats (STAT 1111/1053/1051) and Calculus I (MATH 1221/1231/1252) classes by the end of their freshman year so that they are fully prepared for entry into the economics major.

Note that Calculus I is a *pre-requisite* for intermediate micro and macro (ECON 2101 and ECON 2102), meaning that it cannot be taken concurrently with intermediate micro or macro. Hence we do not recommend putting off the Calculus I course beyond the first semester of sophomore year. We also recommend that students take intermediate micro prior to taking intermediate macro as it will enhance students’ understanding of the macro material.

Intermediate micro and macro are *pre-requisites* for the capstone proseeinvar course (ECON 4198W). Students will not be allowed to enroll in proseeinvar until they have completed intermediate micro and macro. It is therefore imperative to plan ahead and finish these intermediate theory courses by the end of the first semester of senior year at the latest.

We also recommend completing econometrics (ECON 2123) or upper level stats (STAT 2112/2118), as well as the majority of the required upper level economics electives prior to enrolling in ECON 4198W. Materials covered in these classes will be extremely helpful to students in completing their required research projects in the proseeinvar course.
